Disclaimer

<u>SolidProof.io</u> reports are not, nor should be considered, an "endorsement" or "disapproval" of any particular project or team. These reports are not, nor should be considered, an indication of the economics or value of any "product" or "asset" created by any team. SolidProof.io do not cover testing or auditing the integration with external contract or services (such as Unicrypt, Uniswap, PancakeSwap etc'...)

SolidProof.io Audits do not provide any warranty or guarantee regarding the absolute bug- free nature of the technology analyzed, nor do they provide any indication of the technology proprietors. SolidProof Audits should not be used in any way to make decisions around investment or involvement with any particular project. These reports in no way provide investment advice, nor should be leveraged as investment advice of any sort.

SolidProof.io Reports represent an extensive auditing process intending to help our customers increase the quality of their code while reducing the high level of risk presented by cryptographic tokens and blockchain technology. Blockchain technology and cryptographic assets present a high level of ongoing risk. SolidProof's position is that each company and individual are responsible for their own due diligence and continuous security. SolidProof in no way claims any guarantee of security or functionality of the technology we agree to analyze.

Description

Lucky Pool is a decentralized lottery protocol built on the Arbitrum, offering users an automated and transparent experience. Through Lucky Pool, users can purchase lottery tickets over a blockchain network, ensuring a fair and transparent lottery process. For those looking to purchase lottery tickets on the blockchain, Lucky Pool is an ideal choice

Project Engagement

During the Date of April 2023, **Lucky Pool Team** engaged Solidproof.io to audit smart contracts that they created. The engagement was technical in nature and focused on identifying security flaws in the design and implementation of the contracts. They provided Solidproof.io with access to their code repository and whitepaper.

Vulnerability & Risk Level

Risk represents the probability that a certain source-threat will exploit vulnerability, and the impact of that event on the organization or system. Risk Level is computed based on CVSS version 3.0.

Level	Value	Vulnerability	Risk (Required Action)
Critical	9 - 10	A vulnerability that can disrupt the contract functioning in a number of scenarios, or creates a risk that the contract may be broken.	Immediate action to reduce risk level.
High	7 – 8.9	A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.	Implementation of corrective actions as soon aspossible.
Medium	4 – 6.9	A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.	Implementation of corrective actions in a certain period.
Low	2 – 3.9	A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.	Implementation of certain corrective actions or accepting the risk.
Informational	0 – 1.9	A vulnerability that have informational character but is not effecting any of the code.	An observation that does not determine a level of risk

Auditing Strategy and Techniques Applied

Throughout the review process, care was taken to evaluate the repository for security-related issues, code quality, and adherence to specification and best practices. To do so, reviewed line-by-line by our team of expert pentesters and smart contract developers, documenting any issues as there were discovered.

Methodology

The auditing process follows a routine series of steps:

- 1. Code review that includes the following:
 - i) Review of the specifications, sources, and instructions provided to SolidProof to make sure we understand the size, scope, and functionality of the smart contract.
 - ii) Manual review of code, which is the process of reading source code line-byline in an attempt to identify potential vulnerabilities.
 - iii) Comparison to specification, which is the process of checking whether the code does what the specifications, sources, and instructions provided to SolidProof describe.
- 2. Testing and automated analysis that includes the following:
 - i) Test coverage analysis, which is the process of determining whether the test cases are actually covering the code and how much code is exercised when we run those test cases.
 - ii) Symbolic execution, which is analysing a program to determine what inputs causes each part of a program to execute.
- 3. Best practices review, which is a review of the smart contracts to improve efficiency, effectiveness, clarify, maintainability, security, and control based on the established industry and academic practices, recommendations, and research.
- 4. Specific, itemized, actionable recommendations to help you take steps to secure your smart contracts.

Used Code from other Frameworks/Smart Contracts (direct imports)

Imported packages:

Dependency / Import Path	Count
@openzeppelin/contracts-upgradeable/token/ERC20/extensions/ERC20BurnableUpgradeable.sol	1
@openzeppelin/contracts-upgradeable/token/ERC20/extensions/ERC20VotesUpgradeable.sol	1
@openzeppelin/contracts-upgradeable/utils/MulticallUpgradeable.sol	1
@openzeppelin/contracts-upgradeable/utils/StringsUpgradeable.sol	1

Tested Contract Files

This audit covered the following files listed below with a SHA-1 Hash.

A file with a different Hash has been modified, intentionally or otherwise, after the security review. A different Hash could be (but not necessarily) an indication of a changed condition or potential vulnerability that was not within the scope of this review.

v1.0

File Name	SHA-1 Hash
contracts/DropERC20.sol	a656cccd3957a2bd235e135c43824112dcfe5bc1

Inheritance Graph v1.0

CallGraph

v1.0

Scope of Work/Verify Claims

The above token Team provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract (usual the same name as team appended with .sol).

We will verify the following claims:

- 1. Is contract an upgradeable
- 2. Overall checkup (Smart Contract Security)

Is contract an upgradeable

Name Is contract an upgradeable? Yes

Comments:

v1.0

- Owner can deploy a new version of the contract which can change any limit and give owner new privileges
 - Be aware of this and do your own research for the contract which is the contract pointing to

Write functions of contract v1.0

Modifiers and public functions

v1.0

Comments

- Deployer can set following state variables without any limitations
 - maxTotalSupply
 - platformFeeBps
 - Up to 100%

- Deployer can enable/disable following state variables
 - Roles (revoke/grant)
- Deployer can set following addresses
 - contractURI
 - platformFeeRecipient
 - · recipient
- Existing Modifiers
 - Access control role system
- · DEFAULT ADMIN ROLE is able to
 - Set fees to 100%
 - · Set platform fee recipient
 - · Set recipient for primary sales
 - Set contract URI
 - Claim conditions
- The admin is able to set the maxTotalSupply to an arbitrary value. The max total supply is checked before the the claimining with a require statement. It is checking that the max total supply is 0 or total supply + the quantity is below max total supply otherwise the call will be reverted. However, if the maxTotalSupply is set to 1 for example the addresses are not able to claim anymore.

Please check if an OnlyOwner or similar restrictive modifier has been forgotten.

Source Units in Scope

v1.0

Туре	File	Logic Contracts	Interfaces	Lines	nLines	nSLOC	Comment Lines	Complex. Score	Capabilities
9	contracts/DropERC20.sol	1		242	201	115	38	88	HT.
9	Totals	1		242	201	115	38	88	HH.

Legend

Attribute	Description		
Lines	total lines of the source unit		
nLines	normalised lines of the source unit (e.g. normalises functions spanning multiple lines)		
nSLOC	normalised source lines of code (only source-code lines; no comments, no blank lines)		
Comment Lines	lines containing single or block comments		
Complexity Score	a custom complexity score derived from code statements that are known to introduce code complexity (branches, loops, calls, external interfaces,)		

Audit Results

Critical issues

No critical issues

High issues

No high issues

Medium issues

No medium issues

Low issues

Issue	File	Type	Line	Description
#1	All	A floating pragma is set	See description	The current pragma Solidity directive is a floating pragma. It is recommended to use a certain version of pragma
#2	DropER C20	Local variables shadowing	140, 63, 64,	Rename the local variables that shadow another component

Informational issues

Issue	File	Type	Line	Description
#1	Main	NatSpec documentation missing		If you started to comment your code, also comment all other functions, variables etc.
#2	Main	StartTokenID	42	The startToken Id will always be 0 in the claim function

Audit Comments

We recommend you to use the special form of comments (NatSpec Format, Follow link for more information https://docs.soliditylang.org/en/latest/natspec-format.html) for your contracts to provide rich documentation for functions, return variables and more. This helps investors to make clear what that variables, functions etc. do.

08. May 2023:

- · Renounce ownership TX
 - https://arbiscan.io/tx/
 0x3c18651df56433734cfb2760e69dacb8a7f5de6072fb4ead7706e0
 c691d377ca
- Owner can deploy a new version of the contract which can change any limit and give owner new privileges. That means that the contract can be changed in a way that the owner can have more permission to do something in the contract what you are not expecting. For example minting new tokens to sell it. This can also ends up in a rugpull at the end. It is recommended to do your own research here.
- Drop contract was deployed by using third web tools
- · Read whole report and modifiers section for more information

SWC Attacks

ID	Title	Relationships	Status
<u>SW</u> <u>C-1</u> <u>36</u>	Unencrypted Private Data On-Chain	CWE-767: Access to Critical Private Variable via Public Method	PASSED
